

## ECO ISOLA with three inspectable bins

### CONTAINER FOR RECYCLING

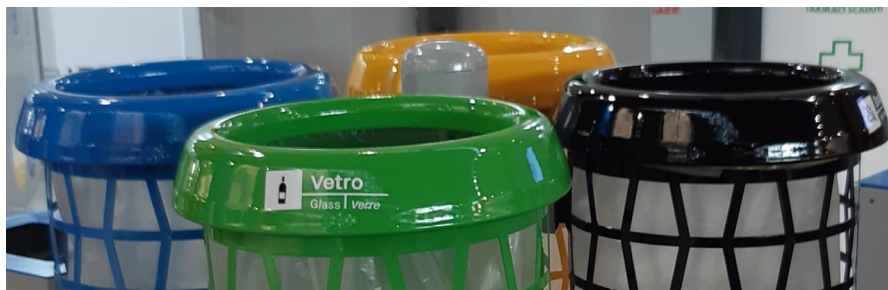

Eco-island is a simple, effective, and appealing solution to promote recycling in public spaces.

It consists of a central supporting steel pole, available in both the in-ground version and the version with a perforated plate for floor mounting. Three bins with openable Ø 350 mm. bag holders are attached to the pole, encouraging waste separation through attractive color-coding.

The inspectable model features a distinctive perforated mesh enclosure, providing an immediate view of the container's contents and simultaneously lightening its appearance, making it suitable for integration into any indoor and/or outdoor setting.

These characteristics make it particularly suitable for installations in public or private places sensitive to security and aesthetics.

The visibility of the collected waste allows users to intuitively identify correct disposal practices."
