

ECO ISOLA with four inspectable bins

CONTAINER FOR RECYCLING

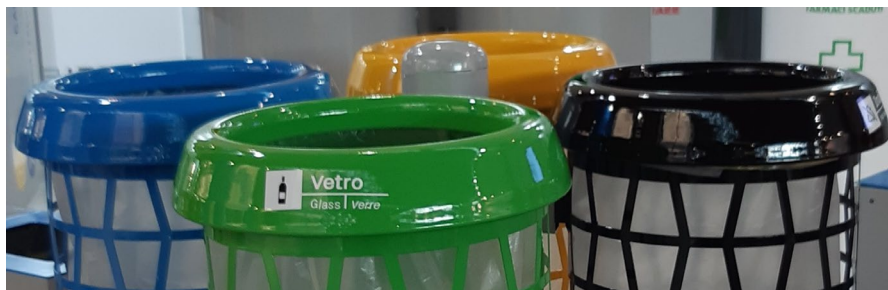

Eco - Island is a simple, effective, and pleasant proposal to promote recycling in public spaces.

It consists of a central support steel pole, available in both the underground version and the version with a perforated plate for floor fixing. Four bins with openable bag holders Ø 350 mm are attached to the pole, encouraging waste separation through attractive coloring.

The inspectable model is characterized by a distinctive perforated patterned enclosure that allows an immediate view of the container's contents, simultaneously lightening its appearance, making it suitable for integration into any indoor and/or outdoor environment.

These features are particularly suitable for installations in public or private places sensitive to security and decorum aspects.

The visibility of the collected waste allows the user to intuitively identify the correct disposal.

CODE	1101056
DESIGN	A.U.ESSE srl
PATENT	Esclusive property of A.U.ESSE srl
DIMENSIONS	Maximum overall dimensions mm. 780 - Height mm. 1000 - Inlet wire height mm. 1000 - Single basket diameter mm 350
MATERIALS	Electrolytically pre-galvanized steel
PAINTING	Fired with acid-resistant enamels - Polyester powder for outdoor use TGIC FREE QUALICOAT
CAPACITY	No. 4 x 40 liters
WEIGHT	kg. 32
PACKING	Pallet with packaging
MEPA POSITION	Goods - Furnishings - Outdoor waste bins
ADDITIONAL COMPONENTS AND OPTIONS:	Code 1101019 Ground fixing kit
